- Document type activity
- Feedback activity

### Integration Services

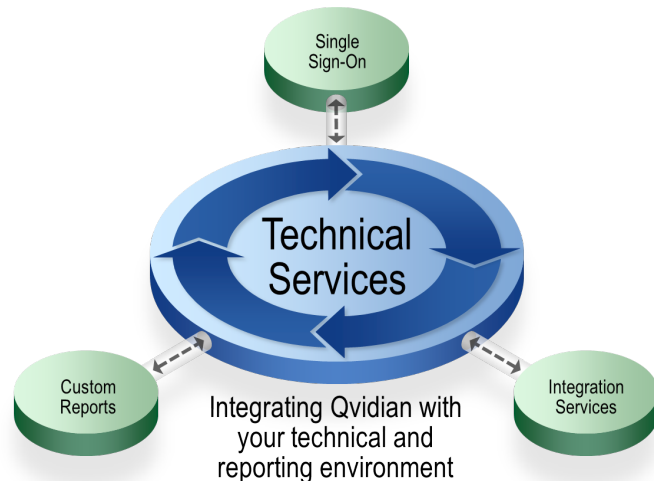

Keep your web services development project on track

## Things to Know about Technical Services

### Single Sign-On

Our Single Sign-On (SSO) service helps your team move seamlessly between Qvidian and other business applications and network resources, including Salesforce.com, without having to log in separately to each instance.

### Custom Reports

To ensure you have the analytics you need to run your business, Qvidian creates custom reports and dashboards to help capture details about a variety of tasks, activities and content within the system. This lets you better manage your operation with complete information in hand.

### Integration Services

We offer a broad range of custom integration capabilities that help organizations move faster to integrate both mainline and proprietary back-office applications with Qvidian. We can accommodate a variety of needs including integrations with configuration/pricing systems, content resources, data processing and many others.
